

There are 2 methods to teach the module (brain) the transmitter code:

1. REMOTE TRANSMITTER CODE LEARNING WITHOUT ACCESSING THE MODULE

Some DesignTech Remote Starters have a special feature that allows new transmitters to be taught without accessing the module under the dash.

1. Turn ignition (key) ON then OFF (Do not start the vehicle).
2. Flip control toggle switch OFF then ON.
3. Slowly push the brake pedal TWICE (dash lights will turn on for 2 seconds).
4. Flip control toggle switch OFF then ON (while dash lights are on for the 2 seconds).
5. PUSH and HOLD the  button on the transmitter.
6. The dash lights will turn on then off to signal the code has been learned.
7. Teach other transmitters. Repeat steps 5 and 6.
8. Dash lights will turn on and off four times to signal the exit of the programming mode.

2. TRANSMITTER CODE LEARNING AT THE MODULE

(The module is often be located under the driver's side of the dash, mounted above the pedal controls. The module is 9" long by 2" wide with two push buttons and one LED on the side)

1. Turn the Control Switch ON
2. Push the RED button to the right of the red LED. The red LED and the dash lights will come on for a second. (The remote starter powers the ignition and accessory wires)
3. Hold down the  button on the transmitter until the red LED and the dash lights come on again for a second. (The module has now learned the transmitter code.) Release the transmitter button.
4. To learn additional transmitters (up to 3 more), immediately (within 5 seconds) push and hold the  button on another transmitter until the red LED and the dash lights come on for a second again.
5. Wait 10 seconds after the last transmitter was taught to the unit, the LED, ignition and accessories will flash 4 times signaling that the unit has exited code Learning.

Note: Teaching the module a new transmitter code will erase all previous codes, so all transmitters must be taught at the same time. You have only 5 seconds between transmitters to begin teaching a new transmitter.

Note: Teaching the module a new transmitter code will erase all previous codes, so all transmitters must be taught at the same time.

HELP LINE: For any assistance regarding this product you may call Directed Electronics on our toll-free telephone number — (800) 876-0800. Additional transmitters can be purchased through your local dealer.

This device complies with FCC Rules Part 15. Operation is subject to two conditions: 1) This device may not cause harmful interference, and 2) it must accept any interference received, including that which may cause undesirable operation.

FCC ID: ELGTRAN2 or ELGTX4

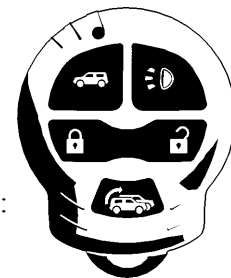

CANADA 1476 102 320 or 14761021029

v0.1

Extra Transmitter User Manual

Thank you for purchasing an additional DesignTech transmitter. Your transmitter has the following special features:

- These transmitters have a special “SHIFT” feature (the  button) which allows control of four separate vehicles with one single transmitter.
- Anti-Scan technology to prevent copying.
- Three color LED to confirm function and transmission verification
- Uses one 3-volt lithium battery (CR2032), easily obtained at Radio Shack (Catalogue # 23-162) or other stores.

To control the **First** vehicle, simply push the button on the transmitter to control the desired function.  for Start;  for Lights;  for Lock and  for unlock.

To control the **Second** vehicle, when the  button is pushed, and while the colored LED light on the transmitter alternates between RED and GREEN push the button on the transmitter to control the desired function.

To control the **Third** vehicle, when the  button is pushed a second time, and while the colored LED light on the transmitter blinks RED push the button on the transmitter to control the desired function.

To control the **Fourth** vehicle, when the  button is pushed a third time, and while the colored LED light on the transmitter blinks GREEN push the button on the transmitter to control the desired function.

After the LED stops flashing, the transmitter goes back to controlling vehicle #1.

When teaching the same transmitter to several different vehicles, it is important to remember to “shift” the transmitter accordingly **before** pushing the **START** button ( Button) to teach the transmitter to the unit.

NOTE: This transmitter will only work with DesignTech remote starters.
